TRANSLITERATION OF CYRILLIC

The system for transliteration (romanization) of Cyrillic used in this index is given below in the column headed "MR (new)". It is the system that has been used in Mathematical Reviews since the beginning of 1983 and it is largely in agreement with other transliteration systems in use in the U.S.A., such as those of the American National Standards Institute (ANSI), the U.S. Library of Congress (LC), and the Institute for Scientific Information (ISI). The principal feature of these systems is that they are intended to be as phonetic as possible for speakers of English.

The table below lists all Cyrillic letters occurring in Slavic languages, and the transliteration schemes used by:

Mathematical Reviews since 1983 = MR (new),
MR before 1983 and Zentralblatt für Mathematik (Zbl) before 1980 = old (MR, Zbl),
Zbl since 1980 = Zbl (new),
American National Standards Institute = ANSI,
U.S. Library of Congress = LC,
Institute for Scientific Information = ISI.

The transliteration of the British Standards Institute (BSI) agrees with that of ISI, except for the letters ё and й ↦ ĭ.

In the schemes of some of these enterprises, a few Cyrillic letters receive more than one transliteration, depending on the language in which the letter occurs. Non-Russian Cyrillic letters and transliterations different from the ones for Russian are identified by superscript numbers:

1	Ukrainian
2	Belorussian
3	Serbian
4	Macedonian
5	Bulgarian.

In order to achieve complete reversibility of the transliteration scheme, centered dots are used as a separating or bracketing device in the following cases: тс→t·s, тш→t·sh, шч→sh·ch, ыу→y·u, ыа→y·a, дj→d·j, лj→l·j, нj→n·j, for separation, and ц→ dzh· for bracketing.

Alphabetization (in indexes, etc.) follows the "stripped" version (i.e., without diacritical marks) of the transliteration; the symbol ″ (double prime) representing ъ and the single prime representing ь are treated as diacritical marks and ignored. The capital version of the Bulgarian ″ is distinguished by an underbar: ″̲.

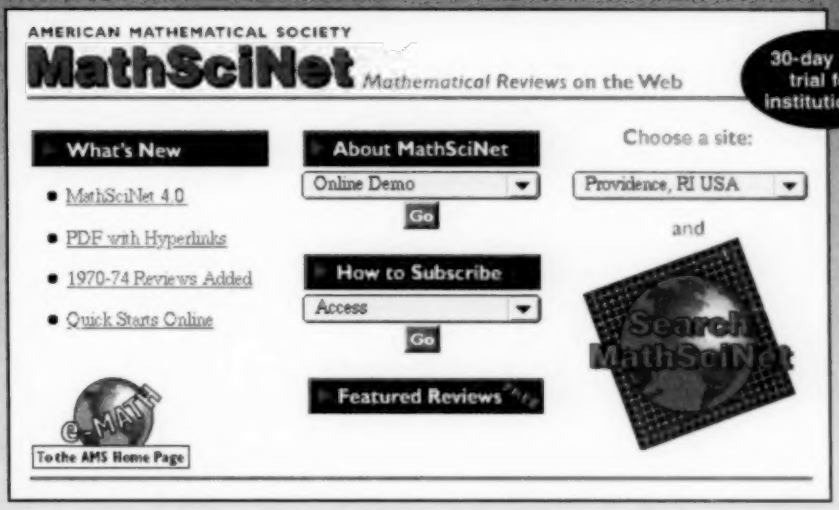
MathSciNet

www.ams.org/mathscinet/



MathSciNet—available on the Web by subscription—provides searching of over 58 years of *Mathematical Reviews* and *Current Mathematical Publications*. **Consortia pricing is available:** please contact Lori Sprague, Publications Administrator, by telephone at 1-401-455-4064 or by email at las@ams.org. New features and enhancements include:

1970–74 full text reviews added
The full text of reviews from 1970–1974 has been added to the MathSciNet database. See What's New on MathSciNet for updated information on added review text.

Online mathematical symbols plus hypertext linking
You can now view mathematical symbols online and retain hypertext functionality within a review. Click on the PDF icon next to an MR number. The review is displayed in PDF format and all links to additional data are functional.

PDF format for download or display
Marked records can now be displayed in PDF format. The PDF version of marked records does not have hypertext links.

Retrieve All records
From a search result set of 50 or fewer items, you can use the Retrieve All button to display or download all reviews without marking records. If the result set is greater than 50, you can display or download the first 50 items of the result set with the Retrieve First 50 button.

Quick Starts available online
Users can now get additional or updated versions of the MathSciNet Quick Start cards online. They are available from the Help Index, Search Help, and on the pulldown menu under About MathSciNet on the home page. The Quick Starts provide easy-to-follow search instructions. Users are welcome to download and print any number that they need.

Search page indicates current site
The top of the left-hand column of the search page indicates which site you are using. To select a different site, scroll through the pulldown menu to choose a site and click on the Go button.

Limit searches to CMP entries
Select the option, Current CMP issue through today, on the Review Search page to limit searches to *Current Mathematical Publications* (CMP) entries. Items from the most current complete issue of CMP in the database plus entries added up to the day of the search will be included. CMP entries are added daily.

PDF version of the *Abbreviations of Serials*
In addition to searching and browsing the journals database, you can display or download the entire *Abbreviations of Serials* . You can find all versions from the MathSciNet Resources button on the Toolbar or from the Journal ID page.

PDF version of the 1991 *Mathematics Subject Classification*
In addition to searching and browsing the 1991 *Mathematics Subject Classification*, you can display or download the entire publication. You can find all versions from the MathSciNet Resources button on the Toolbar or from the Classification ID page.
